

ANAKOVA

bagian 3

Model ANAKOVA dua faktor dan satu variabel konkomitan :

$$Y_{ijk} = \mu + \tau_i + \beta_j + (\tau\beta)_{ij} + \gamma(X_{ijk} - \bar{X}\dots) + \varepsilon_{ijk} \begin{cases} i = 1, 2, \dots, a \\ j = 1, 2, \dots, b \\ k = 1, 2, \dots, n \end{cases}$$

Contoh

Seorang holtikuluturis ingin mengetahui pengaruh pengaruh varietas bunga (faktor A ; LP dan WB) dan tingkat kelembaban (faktor B ; rendah dan tinggi) pada hasil panen bunga (Y). Karena luas tanah pertanian tidak sama, maka ia menggunakan ukuran petak sebagai kontrolnya (konkomitan, X)

Faktor A	Faktor B (Tingkat Kelembaban)			
	B ₁ (rendah)		B ₂ (Tinggi)	
	Y _{i1k}	X _{i1k}	Y _{i2k}	X _{i2k}
A ₁ (Varietas LP)	98	15	71	10
	60	4	80	12
	77	7	86	14
	80	9	82	13
	95	14	46	2
	64	5	55	3
A ₂ (varietas WB)	55	4	76	11
	60	5	68	10
	75	8	43	2
	65	7	47	3
	87	13	62	7
	78	11	70	9
